

CONTAINER TRACKING

Container Tracker is a customizable software tool designed to easily track all types of shipping containers from vendor source to final destination. By bringing together all logistical and financial information in one central place, you can efficiently track container contents from different vendors and multiple purchase orders (POs) within your ERP system. Thanks to its flexibility, Container Tracker allows you to select views and reports based on your specific information requirements helping you to streamline processes and facilitate information coming from and going into your ERP software.

FEATURES:

The Shipping Container tool allows users to select multiple lines from multiple POs from different suppliers to fill your container and fill the container at a variety of shipping points. It allows users to edit the container as required and track multiple expected receipt dates and dynamically calculate weights and volumes as you load the container. The tool also receives all POs in the container via a one-click method. Finally, it allows users to: assign invoices to various PO lines; allocate landed costs in a variety of ways; track estimates and actuals for landed costs by container; and add invoices and costs to brokerage/ customs accounts.

BENEFITS:

Container Tracker offers comprehensive tracking capabilities by allowing you to see all activity relating to a container. This activity includes accounts payable (AP) entry and posted AP information as well as the ability to edit and split PO lines. Container Tracker allows for easy configuration of all container header information fields. The tool manages POs efficiently and effectively using the various features of Container Tracker. There are a multitude of search filters to help you quickly pinpoint and select POs to add to a container.
