EXTEND OE PRICE CONTRACTS AND CODE UPDATES

For companies that offer price variations based on location, zip/postal code, zone or regions, the OE Extended Price Codes utility allows easy creation of extended price codes that are not supported by existing Exact Macola ERP functions. No batch update is necessary and users have the ability to set the priority of price codes and extended price codes as well as method of calculation.

BENEFITS:

This Business Automation Tool (BAT) provides an easy and flexible Excel interface for editing custom pricing options such as: project pricing; alternate address pricing; project/item pricing; alternate address/item pricing; project/item/customer pricing; alternate address/item/product category pricing; state, province or regional pricing; zip code or postal code pricing; promotion pricing; and customer/location pricing.

The Extended Custom OE Price Codes tool allows user to easily edit price codes with Excel. The price code data that will populate in the Excel spreadsheet can be filtered simply by clicking on the fields that you want to appear. This wide selection of fields includes filters such as date, price, and customer number, with many more options available.

FEATURES:

The Extended Custom OE Price Codes tool allows user to add new price codes, update existing price codes, and delete old price codes. It allows users to easily edit price codes in Macola by exporting them to Excel to make the necessary changes. It provides an export/import function to easily modify price code fields in Excel and import changes back into Macola.

The tool also provides a wide range of custom pricing options and organize price codes with the Priority Matrix function.

THIS IS COMPATIBLE WITH:

- Macola 10
- Macola ES
- Progression
